15 MS. LIVINGSTON: My name's Debra Livingston.  
16 I'm here with my eleven-year-old son William and  
17 1 my five-year-old son Simon. I live at 312 Arizona  
18 Avenue with my husband and sons.

19 We're approximately 200 yards from the CSX  
20 rail line. I'm opposed to this nuclear waste  
21 disposal plant because it will adversely affect my  
22 family, my community and every other community  
23 around the route. We're concerned about cumulative  
24 2... small doses of radiation. I I'm concerned about the  
25 possibility, which over time becomes a

1

1     2 cont.     probability, of an accident resulting in acute  
2                toxic and lethal exposure to radiation. They run  
3                parallel to the rapid rail line, which will expose  
4                rapid rail commuters in addition to residents of  
5                communities throughout the route. The route goes  
6                within 160 feet of two schools that are within two  
7                miles from my house. I think effort should be made  
8                to identify how many other schools are similarly  
9                situated. In addition, I think another  
10               consideration is that infants and toddlers will  
11               get double the radiation exposure, once from their  
12               proximity to the waste disposal route and again  
13               from their mothers' contaminated breast milk.

14               I speak for myself, my family and many, many  
15               of my neighbors who could not be here today.  
16               Thank you.

17               MR. LAWSON: Thank you very much.

18               MS. SWEENEY: Thank you.

19               MR. LAWSON: The next speaker is Jim  
20               Hardeman; is that correct?

21               MR. HARDEMAN: Hardeman (different  
22               pronunciation).

23               MR. LAWSON: I'm sorry.

24               MR. HARDEMAN: Hardeman.

25               MR. LAWSON: Hardeman; I'm sorry. Followed
